## Service Center

With experience manufacturing, repairing and servicing distribution equipment, Partner Technologies is one of Canada's leading experts in transformer technology. PTI specializes in the servicing of electrical transformers, reclosers, regulators, electronic controls and distribution equipment.

PTI is registered to the current version of ISO 9001 and is an Authorized Service Center for Eaton's Cooper Power Systems.

### The Power of Quality

The unique facilities within the PTI Service Center contribute to quality care for each repair unit. Every incoming unit receives a thorough inspection to evaluate its condition. The on-site scrap shop can provide quick responsible recycling of raw materials from retired units. The Service Center can make quick repairs using standard stock parts from PTI's large inventory. Repaired units are refilled with clean oil in accordance to environmentally safe practices.

The test laboratory is fully equipped to perform electronic control repair, replacement and testing services for transformer units up to 138kV voltage levels (650 kVBIL). Each repaired regulator, recloser, control, and transformer is functionally tested. Electrical tests are performed to confirm quality and to ensure the units are suitable to be re-installed. A dedicated paint booth is available to apply a new finish on repaired units and control boxes.

Centrally located in Regina, Saskatchewan, PTI serves customers across North America. Since 1989, the PTI Service Center has provided innovative solutions to customers including:

- SaskPower
- Eaton's Cooper Power Systems
- ATCO Electric
- Hydro One
- Manitoba Hydro
- BC Hydro
- Suncor
- Exxon Mobil
- Fortis Alberta/BC
- BP Alaska
- OPG

The Service Center also works with consultants and utilities to supply new and refurbished surplus distribution equipment.

## The Power of Partner Technologies

PTI began in 1989 as a small maintenance and repair shop. When PTI started manufacturing single phase distribution transformers, its expertise grew to the point of recognition as leading innovators of transformer technology.

Customers appreciate the opportunity to phone PTI's helpful staff to tap their knowledge of transformer technology. The responses are quick; the solutions, innovative.

Operating with the flexibility and resourcefulness of a small company, PTI's more than 300 employees are ready to take on the world! Registered to the current version of ISO 9001 and a registered patent, PTI is gaining the respect and business of international markets, including the United States, Caribbean, South America, Europe and Africa.

Like its expertise and reputation for manufacturing high quality transformers, Partner Technologies continues to grow.
